

William Joseph Maddock

SOFTWARE ENGINEER | FULL-STACK, CLOUD & AI APPLICATIONS

Denver Metro Area, CO | (720) 839-3238 | willzaeagle@gmail.com
linkedin.com/in/willmaddockcs | github.com/willmaddock | [Portfolio](#) | [CUCII](#)

Summary

Software engineer and founder with a B.S. in Computer Science and hands-on experience building tested web applications, browser-based AI tools, backend systems, mobile and desktop applications, and data pipelines. Led CUCII from architecture through public release using Astro and TypeScript, with a verified production build, eight static routes, and 251 automated tests across 30 files; independently shipped JobTracker Hub, a full-stack Python/FastAPI and React desktop app with a 48-test suite. Experienced with Ruby on Rails, Python, Kotlin, Rust, AWS learning environments, Git workflows, accessibility, and technical leadership.

Professional Experience

Cosmic Universalism Computational Intelligence Initiative (CUCII)

Dec 2024–Present

Founder & Lead Developer

Remote

Tech: Astro, TypeScript, JavaScript, semantic HTML, modern CSS, Markdown, SVG, Vitest, GitHub Actions, GitHub Pages

- Designed and launched a public static web platform with eight routes, including the CUCII Prompt Studio, Cosmic Breath Explorer, CU-Time tools, research content, and media.
- Built deterministic browser-based prompt generation with typed registries, validation, configuration controls, and TXT/Markdown export without a required backend.
- Developed and maintained accessible interactive components, including a typed 51-state explorer, responsive controls, source-aware content boundaries, and regression tests.
- Established a verified quality gate of 251 automated tests across 30 files and a successful Astro production build with no warnings or errors.

Amazon

Summer 2023–Present

Flex Driver & Warehouse Associate (DDE9)

Denver, CO

- Delivered 30–35 packages/shift on 3-hour routes with a consistent on-time record and 10+ customer compliments; used Linux-based workflows for operational troubleshooting.

Selected Technical Projects

JobTracker Hub

Aug 2026–Present

Python, FastAPI, SQLite, React, PyInstaller

- Built a full-stack, privacy-first job-search dashboard (Python/FastAPI, SQLite, React) with Kanban tracking and hardened file APIs, verified by 48 pytest tests; daily personal use across 110+ applications shows an 81% response rate and 7% interview rate, well above published benchmarks.

SpaceX Launch Analysis

May 2025–Jul 2025

Python, Pandas, scikit-learn, Plotly Dash, Folium

- Created an end-to-end data pipeline from API collection and cleaning through model evaluation and interactive launch-analysis dashboards.

Auraria Mobile Parking (AMP)

Aug 2024–Dec 2024

Kotlin, Android Studio, APIs, Git, ClickUp

- Led a six-person team developing an Android parking application with real-time availability and weather integration using Agile practices.

Technical Skills

Languages: TypeScript, JavaScript, Python, Ruby, Kotlin, Rust, Java, SQL, Go

Frameworks/Tools: Astro, FastAPI, React, Ruby on Rails, Android Studio, SQLite, Vitest, pytest, Pandas, scikit-learn, GitHub Actions, Git, Docker, Kubernetes, AWS services, Google Cloud Storage

Strengths: Full-stack development, backend systems, test automation, static-site architecture, prompt systems, RBAC, data pipelines, accessibility, Agile leadership

Education & Credentials

B.S. Computer Science, Metropolitan State University of Denver

May 2025

GPA: 3.13/4.0 | Coursework: Cloud Computing, Web/Mobile Development, Algorithms, Data Science/Machine Learning

Credentials: IBM Data Science Professional Certificate; Rust Programming Specialization; AWS Generative AI Badge; AWS Machine Learning Foundations; 11 AWS Educate badges
